

## C O N T E N T S

---

| CHAPTER | T I T L E  |
|---------|--|
| I       | BASIC CONCEPTS AND PREREQUISITES                             |
|         | (1) INTRODUCTION   |
|         | (2) NOTATIONS AND DEFINITIONS                                |
| II      | THE FINITE ELEMENT METHODS                                   |
|         | (1) INTRODUCTION   |
|         | (2) WEIGHTED RESIDUAL APPROXIMATION METHOD                   |
|         | (3) GALERKIN METHOD  |
|         | (4) FINITE ELEMENT METHOD FOR SOLVING DIFFERENTIAL EQUATIONS |
|         | (5) $C^s$ CONTINUITY   |
|         | (6) PATCHWORK APPROXIMATION                                  |
|         | (7) FINITE ELEMENT BASIS FUNCTIONS                           |
|         | (8) PROPERTIES OF RATIONAL WEDGE BASIS FUNCTIONS             |
| III     | ELEMENTS AND THEIR PROPERTIES                                |
|         | (1) INTRODUCTION   |
|         | (2) DERIVING SHAPE FUNCTIONS FROM GENERALISED COORDINATES    |
|         | (3) DERIVING SHAPE FUNCTIONS FROM INTERPOLATION FORMULAS     |
|         | (4) TYPES OF ELEMENTS  |
|         | (5) TRANSFORMATION FROM LOCAL TO GLOBAL COORDINATES          |
|         | (6) SELECTION OF AN ELEMENT                                  |
| IV      | FINITE ELEMENT MESH GENERATION                               |
|         | (1) INTRODUCTION   |
|         | (2) AUTOMATIC MESH GENERATION                                |
|         | (3) BOUNDARY VALUE PROBLEM IN PARTIAL DIFFERENTIAL EQUATIONS |
|         | (4) PROGRAM LISTING  |
|         | (5) OUTPUT   |
