

: LIST OF FIGURES :

FIGURE NO.	T I T L E	PAGE NO.
1.1	Schematic representation of frequency dependence of the several contributions to the total polarizability.	8
1.2	Schematic representation of ferroelectric hysteresis loop.	10
1.3(a)	Schematic representation of free energy as a function of polarization for various values of χ for second order transition.	24
1.3(b)	Schematic representation of spontaneous polarization and reciprocal susceptibility near the transition temperature T_c , for second order transition.	24
1.4(a)	Schematic representation of the free energy as a function of polarization for various values of χ for first order transition	27
1.4(b)	Schematic representation of the spontaneous polarization and reciprocal susceptibility near the transition temperature T_c , for first order transition.	27
2.1	Modified form of the Sawyer and Tower circuit.	49
2.2	Experimental set-up to study hysteresis loops of sodium vanadate and potassium vanadate.	51
2.3	Photographs of the hysteresis loop of sodium vanadate at different temperatures.	52

FIGURE NO.	T I T L E	PAGE NO.
2.4	Photographs of the hysteresis loop of potassium vanadate at different temperatures.	53
3.1	Experimental set up for formation of solid state battery.	59
3.2	Plot of temperature dependence of electromotive force observed for a sodium vanadate fused sample.	61
3.3	Plot of temperature dependence of electromotive force observed for a potassium vanadate fused sample.	62
4.1	Temperature dependence of the dissipation of a ferroelectric crystal switched with an alternating signal.	69
4.2	Block diagram of the experimental set up for TANDEL.	72
4.3	Experimental set-up for TENDEL	74
4.4	The variation of second harmonic voltage with d.c. bias for different a.c. voltages for sodium vanadate.	76
4.5	The variation of second harmonic voltage with d.c. bias for different a.c. voltages for potassium vanadate.	77
