

LIST OF FIGURES

Figure No. No.	Title	Page
1.1	Pyrochlores structure of general formula $A_2B_2O_7$ showing 6fold coordination of B and 8 fold coordination of A atoms.	3
1.2	Change in shape of coordination polyhedra of A and B ions with 48 f oxygen parameter x in $A_2B_2O_6O'$ Structure.	6
1.3	Variation of bond distances as a function of 48f oxygen Parameters	8
1.4	Possible substitution at A and B sites of $A_2^{3+} B_2^{4+} O_7$ oxide Pyrochlores.	12
1.5	Stability field diagram for $A_2^{3+} B_2^{4+} O_7$ pyrochlores.	14
2.1	Standard flow chart of ceramic method	23
2.2	x-ray diffractometer.	34
2.3	x-ray diffraction pattern for sample $Ce_2Ti_2O_7$.	36
2.4	x-ray diffraction pattern for sample $Ce_{1.8}Nd_{0.2}Ti_2O_7$.	37
2.5	x-ray diffraction pattern for sample. $Ce_{1.6}Nd_{0.4}Ti_2O_7$.	38
2.6	x-ray diffraction pattern for sample $Ce_{1.4}Nd_{0.6}Ti_2O_7$	39
2.7	x-ray diffraction pattern for sample $Ce_{1.2}Nd_{0.8}Ti_2O_7$	40
2.8	x-ray diffraction pattern for sample $CeNdTi_2O_7$	41

3.1a	The conductivity cell.	55
3.1b	Circuit diagram for electrical resistivity	55
3.2	Experimental setup for the measurement of D.C. electrical resistivity.	56
3.3	Schematic diagram of experimental setup for the measurement of thermoelectric power.	58
3.4	Experimental setup for the measurement of the thermoelectric power.	60
3.5	Variation of $\log \rho$ with temp for $(x=0)$ $\text{Ce}_2 \text{Ti}_2 \text{O}_7$	62
3.6	Variation of $\log \rho$ with temp for $(x=0.2)$ $\text{Ce}_{1.8} \text{Nd}_{0.2} \text{Ti}_2 \text{O}_7$	63
3.7	Variation of $\log \rho$ with temp for $(x=0.4)$ $\text{Ce}_{1.6} \text{Nd}_{0.4} \text{Ti}_2 \text{O}_7$	64
3.8	Variation of $\log \rho$ with temp for $(x=0.6)$ $\text{Ce}_{1.4} \text{Nd}_{0.6} \text{Ti}_2 \text{O}_7$	65
3.9	Variation of $\log \rho$ with temp for $(x=0.8)$ $\text{Ce}_{1.2} \text{Nd}_{0.8} \text{Ti}_2 \text{O}_7$	66
3.10	Variation of $\log \rho$ with temp for $(x=1)$ $\text{Ce Nd Ti}_2 \text{O}_7$	67
3.11	Variation of TEP with temperature for $(x=0)$ $\text{Ce}_2 \text{Ti}_2 \text{O}_7$	70
3.12	Variation of TEP with temperature for $(x=0.4)$ $\text{Ce}_{1.6} \text{Nd}_{0.4} \text{Ti}_2 \text{O}_7$	71
3.13	Variation of TEP with temperature for $(x=0.6)$ $\text{Ce}_{1.4} \text{Nd}_{0.6} \text{Ti}_2 \text{O}_7$	72
4.1(a)	An atom without field.	80
4.1(b)	Electronic polarization.	80
4.2	Double Layer Capacitor.	85

4.3	Variation of ϵ' with frequency (Log f) for all compositions	92
4.4	Variation of ϵ'' with frequency (log f) for all compositions.	93
4.5	Variation of $\tan \delta$ with frequency (log f) for all samples.	94
4.6	Variation of ϵ' with temperature for all compositions at 10 KHz.	96
4.7	Variation of $\tan \delta$ with temperature for all composition 10 KHz.	97
4.8	Variation of ϵ' with temperature for (x=0) $\text{Ce}_2\text{Ti}_2\text{O}_7$.	98
4.9	Variation of ϵ' with temperature for (x=0.4) $\text{Ce}_{1.6}\text{Nd}_{0.4}\text{Ti}_2\text{O}_7$.	99
4.10	Variation of ϵ' with temperature for (x=0.8) $\text{Ce}_{1.2}\text{Nd}_{0.8}\text{Ti}_2\text{O}_7$.	100
