

CONTENTS

Chapter - I

AN INTRODUCTION TO SOFTWARE RELIABILITY

1.1	Introduction	1
1.2	Definitions	2
1.3	Software Reliability Modeling	7
1.4	Notations	10
1.5	Failure Rate of a Software	11
1.6	Software Failures verses Hardware Failures	13
1.7	Summary of Subsequent Chapters	17

Chapter - II

REVIEW OF SOME SOFTWARE RELIABILITY MODELS

2.1	Introduction	19
2.2	The JM model	23
2.3	Imperfect Debugging model	27
2.4	A model by Schink and Wolverton	27
2.5	The De-eutrophication of Moranda	28
2.6	Bayesian Reliability Growth model	30
2.7	Bayes Empirical Bayes or Hierarchical model	35
2.8	Bayesian Differential Debugging model	36
2.9	Time-dependent Error detection model	37
2.10	Logarithmic Poisson Execution Time model	41

Chapter - III

PARAMETER ESTIMATION FOR JM AND DE-EUTROPHICATION MODEL

3.1	Introduction	44
3.2	Parameter estimation and behavior of likelihood function	45
3.3	Conditions for finite MLE	48
3.4	Asymptotic distribution of \hat{N} and $\hat{\Lambda}$	55
3.5	Empirical Study	60
3.6	MLE for parameters of De-eutrophication model by Moranda	64

Chapter - IV

ESTIMATION OF PARAMETERS FOR A NHPP MODEL

4.1	Introduction	66
4.2	Some results related with NHPP	67
4.3	Estimation of parameters for G079b model	71
4.4	Estimation of parameters for modified G079b model	77
4.5	Scope for Further Research	93

Appendix - A	95
