

▄▄▄ LIST OF FIGURES ▄▄▄

FIGURE NO.	TITLE	PAGE NO.
1	Infra-structure of weaving shed showing location of powerlooms, workers, reeling machine, sampling spot of dust.	18
2 & 3	Pattern of Pulse rate/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day and first working day after weekly off.	58
4 _a , 4 _b & 5 _a , 5 _b	Pattern of Diastolic blood pressure and Systolic blood pressure in mmHg of workers before shift and after shift according to work exposure and age groups in years respectively on any working day and first working day after weekly off.	59 & 60
6 & 7	Pattern of Body temperature in °C of workers before shift and after shift according to work exposure and age groups in years respectively on any working day & first working day after weekly off.	62
8 & 9	Pattern of PEFR values in liter/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day & first working day after weekly off.	63
10 & 11	Pattern of Tidal volume in liter/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day.	64
12 & 13	Pattern of IRV values in liter/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day.	65
14 & 15	Pattern of ERV values in liter/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day.	66

FIGURE NO.	TITLE	PAGE NO.
16 & 17	Pattern of Vital capacities in liter/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day.	67
18 & 19	Pattern of TLC values in liter/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day.	68
20 & 21	Pattern of FRC values in liter/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day.	70
22 & 23	Pattern of FVC values in liter/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day.	71
24 & 25	Pattern of FEV ₁ values in liter/min. of workers before shift and after shift according to work exposure and age groups in years respectively on any working day.	72
26	Normal expirograph and forced expiratory volume of and worker exposed to cotton dust before shift and after shift and control.	73
27	Chest X-ray P.A. of worker exposed to cotton dust.	74
