## **GENERAL REMARKS**

- 1. The structures are indicated by a double number, the first part of which indicates the chart in which it occurs and the second part indicates the serial number of structures.
- 2. The I.R. spectra were recorded in nujol or liquid film or as a KBr pellet on Beckmann R-32 or Perkin-Elmer783 instruments and the values are expressed in cm $^{-1}$ .
- 3. The PMR spectra were recorded in  $CCl_4$  with TMS as an internal reference on Perkin-Elmer (90 MHz) spectrometers. The chemical shifts are expressed in ppm ( $\delta$  units).
- 4. The spectra are given just before the experimental part.
- 5. The melting points are uncorrected.
- 6. The organic extracts were dried over anhydrous sodium sulphate, unless otherwise mentioned.
