

CONTENTS

Chapter No.		Page No.
Chapter I: Introduction		
1.1	The Energy Crisis	1
1.2	The Present Conventional and Non-conventional sources of energy	3
1.3	The Sun and Solar Energy	4
1.4	Recent Technologies in solar energy conversion	5
	1.4.1 What is Thin Film?	6
	1.4.2 Various Deposition Techniques	7
1.5	Solar Cells	10
	1.5.1 Theoretical Considerations	10
	1.5.2 Historical Development of solar cells	11
	1.5.3 Kinds of Solar Cells	13
1.6	Literature Search	15
	1.6.1 Literature Search of CdS thin films	15
	1.6.2 Literature Search of PbS thin films	18
	1.6.3 Literature Search of $Cd_xPb_{1-x}S$ films	22
1.7	Research problem	22
	References	24
Chapter II: Theoretical background		
2.1	Introduction	33
2.2	Semiconductor	33
	2.2.1 Concept of energy bands	33
	2.2.2 Types of semiconductors	36
2.3	Theoretical background of chemical bath deposition	38
2.4	Theoretical background of characterization techniques	41
	2.4.1 XRD analysis	41
	2.4.2 Compositional study	44

2.4.3	Optical absorption	44
2.4.4	Electrical transport properties	45
2.4.5	Scanning electron microscopy	46
2.4.6	Photoelectrochemical cell	46
2.4.6.1	Electrochemistry of Semiconductor electrolyte interface	46
	References	51
	Chapter III: Experimental details	
3.1	Introduction	53
3.2	Chemical bath deposition system	53
3.3	Preparation of thin films	56
3.3.1	Substrate used for deposition of thin films	56
3.3.2	Cleaning of substrate	57
3.3.3	Preparation of solutions	57
3.4	Deposition of thin films	57
3.5	Thin film characterization	58
3.5.1	Thickness measurements	58
3.5.2	Compositional analysis	58
3.5.3	XRD analysis	59
3.5.4	Optical absorption measurements	59
3.5.5	Electrical transport properties	59
3.5.5.1	Electrical conductivity measurements	59
3.5.5.2	Thermoelectric power measurements	62
3.5.6	Scanning electron microscopy	63
3.6	Photoelectrochemical cell study.	63
3.6.1	Design and fabrication of PEC cell	63
3.6.2	Electrical characterization of PEC cell	63
3.6.3	The current-voltage characteristics in dark	65
3.6.4	The Capacitance-voltage characterization in dark	65
3.6.5	The barrier height determination	66
3.6.6	Power output curves	66

References	67
Chapter IV: Characterization of Cd_xPb_{1-x}S thin films	
4.1 Introduction	69
4.2 Growth mechanism	69
4.3 Thickness measurement	73
4.4 Compositional analysis	73
4.5 Structural and morphological investigation	74
4.6 Optical properties	81
4.7 Electrical properties	86
4.7.1 Electrical conductivity	86
4.7.2 Thermoelectric power measurements	89
4.8 Photoelectrochemical cell study	90
4.8.1 Photoelectrochemical properties	90
4.8.1.1 Dynamic I-V characteristics in Dark	90
4.8.1.2 Power output characteristics	92
4.9 Conclusions	94
References	99
Chapter V: Summary and conclusions	
5.1 General	101
5.2 Preparation of Cd _x Pb _{1-x} S thin films	101
5.3 Mechanism of Cd _x Pb _{1-x} S thin film formation	102
5.4 Characterization of Cd _x Pb _{1-x} S thin films	102
5.4.1 Structural and Morphological study	102
5.4.2 Compositional analysis	103
5.4.3 Optical properties	103
5.4.4 Electrical Properties	103
5.4.5 PEC cell study	104
5.5 Conclusions	104
