Sample Data Collection and Interpretation

This section deals with the technique of sample data collection and interpretation. Sample data was essential in order to build a computer simulation model of the railway reservation system in Kolhapur.

Prior to data collection on arrivals, departure and service time of customers, the Reservation System was thoroughly studied and information regarding the office hour timings, number of working days, number of counters, functions of individual counters and the queuing disciplines was collected.

The Reservation office opens at 8 am and the selling counters open at 8:30 am. Tokens are issued to arriving customers at a special counter called the token counter. Customers entering the system at that period have to wait upto 30 minutes for the selling counters to open. Once issuing counters open, customers are called in ascending order of their numbers (FIFO) . Both token and issue counters proceed with their work until 12:30 pm when they close for the lunch hour. They resume work at 1:30 pm. At 3 pm the token counter closes and no more tokens are issued. The selling counters, however, continue their operation upto 5:30 pm. In situations where customers holding tokens have all been serviced and there is still time before final closing, the selling counters issue tickets to customers arriving into the system, even without tokens.

Sample data of arrival, call, service and departure times of individual customers was personally collected by the researcher using observation method for a period of one week.

The researcher monitored the arrival of customers to the system, their call times to respective counters and departure

times using a watch. Time was recorded in HH:MM:SS format, where HH = hours, MM = minutes and SS = seconds.

Accuracy of sample data recorded is in seconds as there were occasional observations of arrival gaps and service times of only a few seconds.

The reason for the selection of the above format of time recording was the ease of conversion into seconds and reversion into the original format, in order to calculate waiting, service, counter idle times that could not be directly calculated.

Sample data collected was then tabulated on the computer in the format shown below:-

Sample Data of List of "date"							
Counter Number "N"				Page Number "P"			
Col 1	Col 2	Col 3	Col 4	Col 5	Col 6	Col 7	Col 8
Cust. No.	Arr. Time	Call Time	Dept. Time	Arr. Gap	Service Time	Wait Time	Counter Idle Time

Counter number 'N' indicates to which counter the sample belongs. The 'date' is that on which the sample data was collected. Page number 'P' shows continuity of data for each counter, commencing at page 1.

The first column records customer token number. Column 2 shows time when any customer arrives for service at the system. Column 3 indicates call time, i.e. time at which the customer is

actually summoned in order to purchase his ticket. This is the time when the display unit above each selling counter flashes a token number, informing the customer to go to that particular counter.

Column 4 is departure time, the time customer leaves the selling counter after being serviced. Column 5 shows time between two consecutive arrivals, called the interarrival gap. Column 6 records service time, the time duration spent at the selling counter.

Column 7 indicates waiting time, time spent waiting for service within the system. Column 8 shows duration for which the selling counter has been idle, i.e. no customers were available within the system during that period for servicing.

Data analysis

The job of analysis of the data is handled by the computer program. Analysis is carried out on both sample data and simulated data that is generated by the computer. Analysis reports are in the form of numerical tables and graphs. These reports are as follows:-

A. System performance

1. Statistical measures.
2. Queue length.

B. Graphs

Statistical measures:

This report indicates total number of arrivals per counter during a given period of time, average number of arrivals per day, average service time, interarrival gap, average waiting

time, counter idle time, traffic intensity and percentage of server utilization at individual counters.

Queue length report:

This report indicates the average length of queue on a daily basis, longest queue length at any counter and average length of queue for a given period of time, both for simulated and sample data.

Graphs:

These are plotted by the computer to illustrate number of arrivals to the system for the entire system, number of arrivals at individual counters, the latter again at different intervals during the day. Interarrival gaps and service time graphs show variations in these variables. This will be evident in the computer generated content of the following pages.

Sample data analysis report

Sample data analysis report indicated that average number of arrivals per day was 140 for Counter Number 1. Average waiting time at this counter was 1 hour 8 minutes and 15 seconds. Average service time was 3 minutes 22 seconds. The time gap between arrivals was 2 minutes 45 seconds. Average counter idle time was 5 minutes 53 seconds. Traffic intensity at this counter was as high as 1.16. Server utilization was 78.39%. This counter issues tickets for the Sayadri train, II Class Reservation.

The average number of arrivals for Counter Number 2 has been 27 customers per day. Average waiting time was 5 minutes 23 seconds while average service time was 5 minutes 13 seconds. Average arrival gaps recorded were 17 minutes 33 seconds. Average counter idle times were 5 hours 32 minutes 21 seconds per day.

QUEUING SYSTEM ANALYSIS REPORT FOR SAMPLE DATA

FOR COUNT NO: 1

FOR 1 WEEK OF SAMPLE DATA

TOTAL NO OF ARRIVAL OF CUST. : 980
AVERAGE NO OF ARRIVAL / DAY : 140
AVERAGE WATING TIME/CUSTOMER : 1 Hours 8 Minutes 15 Seconds
AVERAGE SERVICE TIME/CUSTOMER: 3 Minutes 22 Seconds
AVERAGE ARRIVAL GAP: 2 Minutes 54 Seconds
AVERAGE COUNT.IDLE TIME/DAY..: 6 Minutes 18 Seconds
TRAFFIC INTENSITY:1.16
SERVER UTILISATION: 78.39%

QUEUING SYSTEM ANALYSIS REPORT FOR SAMPLE DATA

FOR COUNT NO: 2

FOR 1 WEEK OF SAMPLE DATA

TOTAL NO OF ARRIVAL OF CUST. : 186
AVERAGE NO OF ARRIVAL / DAY : 27
AVERAGE WATING TIME/CUSTOMER : 5 Minutes 23 Seconds
AVERAGE SERVICE TIME/CUSTOMER: 4 Minutes 13 Seconds
AVERAGE ARRIVAL GAP: 17 Minutes 33 Seconds
AVERAGE COUNT.IDLE TIME/DAY..: 5 Hours 44 Minutes 12 Seconds
TRAFFIC INTENSITY:0.24
SERVER UTILISATION: 18.69%

QUEUING SYSTEM ANALYSIS REPORT FOR SAMPLE DATA

FOR COUNT NO: 3

FOR 1 WEEK OF SAMPLE DATA

TOTAL NO OF ARRIVAL OF CUST. : 541
AVERAGE NO OF ARRIVAL / DAY : 77
AVERAGE WATING TIME/CUSTOMER : 43 Minutes 19 Seconds
AVERAGE SERVICE TIME/CUSTOMER: 5 Minutes 25 Seconds
AVERAGE ARRIVAL GAP: 5 Minutes 49 Seconds
AVERAGE COUNT.IDLE TIME/DAY..: 42 Minutes 7 Seconds
TRAFFIC INTENSITY:0.93
SERVER UTILISATION: 69.77%

QUEUE LENGHT'S REPORT FOR SAMPLE DATA

FOR 1 WEEK OF SAMPLE DATA

LONGEST QUEUE LENGHT FOR COUNTER NO .1 = 53

AVERAGE QUEUE LENGHT/DAY FOR COUNTER NO .1 = 17

LONGEST QUEUE LENGHT FOR COUNTER NO .2 = 5

AVERAGE QUEUE LENGHT/DAY FOR COUNTER NO .2 = 0

LONGEST QUEUE LENGHT FOR COUNTER NO .1 = 25

AVERAGE QUEUE LENGHT/DAY FOR COUNTER NO .1 = 6

Traffic intensity has been as low as 0.24. Server utilization was 18.69%. This counter issues tickets for both Mahalakshmi & Sayadri 1st Class and A/C reservations.

Counter Number 3 had an average arrival of 77 customers per day. Average waiting time per customer was 43 minutes 19 seconds. Average service time at this counter, based on sample data was 5 minutes 25 seconds. Average idle time per day was 41 minutes 33 seconds. Traffic intensity was 0.93 and server utilization was 69.77% at this counter. This counter issues tickets for the Mahalakshmi train, II Class Reservation.

Sample Data Graphs:

These graphs are generated by the computer to provide a pictorial representation of the sample data. Graphs are drawn for the entire system as well as for individual counters. These graphs appear in subsequent pages of this section.

The purpose of these graphs was to highlight arrival patterns for individual counters and the whole system, and during various hours of the day to enable the researcher to draw conclusions with the help of these graphs. There are 8 different graphs in all, drawn with help of the computer for sample data.

Graph Number 1: Relationship between number of arrivals and the days of the week for the entire system.

Graph Number 2: Average number of arrivals vs hours of the day for the entire system.

Graph Number 3,4,5: These graphs show average number of arrivals vs days of the week for individual counters.

Graph Number 6,7,8: These graphs represent the relationship between various hours of the day and average number of arrivals, at individual counters.

In some graphs, the differences between successive values was very small. Due to this, the researcher has taken the liberty of rescaling portions of graphs in order to highlight these small changes in values. The variation between maximum and minimum has been scaled down to 30. From zero to any minimum value, the graph is always depicted as a fixed range depending on data values.

It is observed from the graphical analysis that maximum number of arrivals were on Mondays and Saturdays for the entire system as well as individual counters. The busiest hours of the day were the periods 8-11 am and 2-3 pm for the entire system as well as individual counters.

MON-DAY TUE-DAY WED-DAY THU-DAY FRI-DAY SAT-DAY SUN-DAY
