
PREFACE . . .

I - PREFACE

The present investigation deals with the study of soil fungi of Karad region. It deals with the effect of soil types, physico-chemical properties of soil, plant cover and seasonal variation on the distribution of microfungi during the January, 1989 to December, 1989. Four types of soils such as Sugarcane field, deposited clay and black cotton soil and Banana field, deposited clay and black cotton soil are selected for this study.
