

STATEMENT - I

Present work is based on the survey of aeromycological studies of Karad region. Aerobiology is concerned with the distribution of living microorganisms in the air. The spores of many fungi are allergenic in nature and causes various kinds of metabolic disorders in man. So there is a great need for undertaking aerobiological studies in various parts of this country, to find out the air spora present in the atmosphere.

Since no aerobiological investigations were carried out in Karad region. So the work reported in this thesis is original and has not been submitted for any other Diploma or Degree in this or any other university.

? → for its kind

STATEMENT - II

This present work is a new in aerobiology, which is carried out in the library of S.G.M.College, Karad. This work however reports a composition of fungal spores, and this is a new investigation. The conclusions are based on up-to-date and exhaustive available literature in the field collected from extensive consultation of Journals, review articles, references, books, monographs etc.
