

STATEMENT-I

The present work is based on the discovery of facts which are new for Phaseolus aconitifolius (Jacq.). So far there has not been any attempt to study the effect of salinity on different metabolic processes such as organic, nitrogen and inorganic metabolisms. The growth and mineral nutrition were also studied under saline conditions. Therefore, this work is a original one. This work has not been previously submitted for the award of any degree.

STATEMENT-II

This work reports a new investigation. The sources from which information is gathered have been listed in the references. The current journals, reviews, text books and monographs have been extensively referred and correlated. Every attempt has been made to keep the reference work as upto date as possible.
