

## LIST OF FIGURES

<u>Chapter</u>	<u>Fig</u>	<u>Title</u>	<u>Page</u>
II	1	The plant <u>Ficus pumila</u> L. showing its habit and morphology in general	63
	2	A cross section of a mature leaf of <u>F. pumila</u> L. passing through the midrib showing anatomical features	63
	3	A cystolith (an aggregate form of CaCO <sub>3</sub> crystals) as seen in t.s. of a leaf of <u>F. pumila</u> L.	63
	4	Autoradiogram showing the early products of photosynthesis (ethanol soluble fraction) following 5 sec light <sup>14</sup> CO <sub>2</sub> fixation in <u>Ficus pumila</u> L.	73
	5	Autoradiogram showing the steady state products of photosynthesis (ethanol soluble fraction) following 1 hr light <sup>14</sup> CO <sub>2</sub> fixation in <u>Ficus pumila</u> L.	76
III	6	Effect of moisture stress on proline content in young, mature and senescent leaves of <u>F. pumila</u>	94
	7	Effect of moisture and age on proline in <u>F. pumila</u>	95
	8	Proline content and WSD in <u>Ficus pumila</u>	96
	9	Young, mature and senescent leaves of <u>F. pumila</u>	97
