STATEMENT I

The present work is based on the earlier discoveries in the field of mangrove physiology. So far there has not been any attempt to study salt excretion together with effect of salinity on excretion and productivity of A. ilicifolius and A. marina. Therefore, this work is original one. This work has not been previously submitted for the award of any degree.

STATEMENT II

This work reports a new investigation. The sources from which information is gathered have been listed in the references. The current journals, reviews, text-books and monographs have been extensively referred and correlated. Every attempt has been made to keep the reference work as upto date as possible.
