	Page
Chapter I - <u>Introduction</u>	
1. HISTORY	1 to 7
2. BASIC CONCEPTS	8 to 23
i) Fluid	08
ii) Viscosity	09
iii) Kinematic Viscosity	11
iv) Steady and unsteady Fluids	12
v) Non-dimensional numbers	12
a) Reynolds Number	
b) Prandtl Number	
c) Nusselt Number	
iv) Flow through porous media.	15
vii) Permeability	16
viii) Porosity	17
ix) Two dimensionals Boundary Layer Equations	18
x) Characteristic Boundary Layer Parameters.	19
a) Boundary Layer thickness (δ)	
b) Displacement thickness (δ_1)	
c) Momentum thickness (δ_0)	
d) Skin friction	
xi) Thermal Boundary Layer	22
3. REFERENCES	24 to 30

	Page
Chapter-II - Approximate solution of steady laminar flow past a horizontal plate embedded in a saturated porous medium	31 to 41
1. Introduction	32
2. Mathematical Formulation	33
3. Analysis of the problem	34
4. Table	39
Discussion and Conclusion	39
Graph	40
References	41
Chapter III - Steady Laminar flow past a heated horizontal plate embedded in a saturated porous medium.	42 to 55
1. Introduction	43
2. Physical Model and Mathematical formulation	44
3. Analysis of the problem	45
4. Results and Discussions	49
5. Conclusions	50
6. Tables	51
Graphs	53
REFERENCES	54

	Page
Chapter IV - Approximate solution of Pohlhausen's	56 to 70
problem of free convection on a	
heated vertical plate.	
1. Introduction	57
2. Nomenclature	58
3. Solution of problem	59
4. Discussion and Conclusions	66
Table	67
Graph	68
REFERENCES	70
