

## LIST OF TABLES

Sr. No.	Contents
1	Physico – Chemical parameters experimental and animal collection site water
2	Bioaccumulation of Calcium and Lead in gill of freshwater bivalve <i>Lamellidens marginalis</i> after 8 days exposure
3	Bioaccumulation of Calcium and Lead in gill of freshwater bivalve <i>Lamellidens marginalis</i> after 16 days exposure
4	Bioaccumulation of Calcium and Lead in mantle of freshwater bivalve, <i>Lamellidens marginalis</i> after 8 days exposure
5	Bioaccumulation of Calcium and Lead in mantle of freshwater bivalve <i>Lamellidens marginalis</i> after 16 days exposure
6	Protein content in Gill of <i>Lamellidens marginalis</i> at different concentrations of Lead and Calcium for different exposure periods
7	Acid Phosphatase activity in Gill of <i>Lamellidens marginalis</i> at different concentrations of Lead and Calcium for different exposure periods
8	Alkaline Phosphatase activity in Gill of <i>Lamellidens marginalis</i> at different concentrations of Lead and Calcium for different exposure periods
9	Protein content in Mantle of <i>Lamellidens marginalis</i> at different concentrations of Lead and Calcium for different exposure period
10	Acid Phosphatase activity Mantle of <i>Lamellidens marginalis</i> at different concentrations of Lead and Calcium for different exposure period
11	Alkaline Phosphatase activity in Mantle of <i>Lamellidens marginalis</i> at different concentrations of Lead and Calcium for different exposure periods
