Chapter-1.

LIQUID CRYSTALS :

1.1	Introduction	1
1.2	Classification of Liquid crystals	3
1.3	Classification of Thermotropic Liquid crystals.	4
1.4	Lyotropic Liquid crystals.	11
1.5	Liquid Crystals as NMR Solvents.	14

Chapter-2.

BASIC THEORY OF NMR SPECTROSCOPY :

2.1	Introduction	20
2.2	Chemical Shift	23
2.3	Indirect Spin-Spin coupling constants.	25
2.4	Direct dipole-dipole coupling constant.	27
2.5	Relaxation times and Line widths.	29
2.6	The anisotropy of chemical shift.	31

Chapter-3.

ANALYSIS OF NMR SPECTRA OF ORIENTED- MOLECULES :

3.1	The NMR spin Hamiltonian for oriented-molecules.	33
3.2	The direct dipole-dipole Interaction.	34
3.3	Nuclear Zeeman Interaction	38
3.4	Indirect spin-spin Interaction	40
3.5	Analysis of the Spectra.	41
3.6	Interpretation of Dipolar couplings-and molecular geometry of the solute.	45
3.7	Influence of molecular vibrations.	46

Chapter-4.

EXPERIMENTAL DETAILS AND RESULTS :

4.1	Molecules studied	48
4.2	Solvents used	49
4.3	Preparation of the Samples	50
4.4	Recording of the Spectra	51

4.5 P-Nitrophenol in Lyotropic Phase:

4.5.1	Introduction	53
4.5.2	Analysis of the spectrum	56
4.5.3	Molecular geometry	58

4.6 Isonicotinic Acid in Lyotropic phase:

4.6.1	Introduction	60
4.6.2	Experimental details and spectral analysis.	63
4.6.3	Molecular geometry	65

4.7 4-Iodo-Aniline in Thermotropic Phase:

4.7.1	Introduction	65
4.7.2	Experimental details	69
