

A C K N O W L E D G E M E N T S

Our thanks, first of all, are due to the Ministry of Environment and Forests, Government of India, New Delhi for making the financial assistance promptly available to us in successfully conducting the present research project. We are also grateful to the authorities of the Shivaji University, Kolhapur for making the necessary facilities available to us in the Department itself and for encouraging us from time to time.

Besides, we were lucky enough to receive valuable cooperation and assistance from innumerable individuals and institutions in the collection of relevant literature pertaining to the present topic. Furthermore, there were several individuals and groups who were kind enough to render their valuable services in the collection of data in the field. As the long list of all those who assisted us from time to time will run into several pages, we are unable to mention their names. This, however, does not lessen the contribution that they made in whatever capacity they could, in successfully completing the present work through all the stages of its completion. We are, thus, very much indebted to them as well.
