

## INDEX

| Unit No. | Title                                                                       | Pg. No. |
|----------|-----------------------------------------------------------------------------|---------|
| -        | A brief outline of the Project                                              | 1       |
| 1        | A statistical model and related inference                                   | 8       |
| 2        | Models based on Composite functions                                         | 34      |
| 3        | A class of Drifted Distributions                                            | 38      |
| 4        | Models based on Conditional Probabilities                                   | 79      |
| 5        | Some distributions derived from Compounding & Conditioning                  | 83      |
| 6        | Distributions of certain stopping times based on Bernoulli random variables | 90      |
| 7        | Average Time to Signal in a Sequence of Independent Bernoulli Trials        | 102     |
| -        | References                                                                  | 108     |
